

COLLINS AEROSPACE AIRLINE INTEGRATION

HARNESSING THE POWER OF IATA TRAVEL PASS

Supporting a new digital health platform for airline passengers

To help re-open international borders and restart the aviation industry, Collins Aerospace is teaming with IATA to provide support for its new digital health platform: Travel Pass. The app enables accurate information to be provided to an airline's passengers on test requirements as well as to verify that a passenger meets the requirements for travel to their selected location.

The IATA Travel Pass is a global and standardized solution used to validate and authenticate country regulations regarding COVID-19 passenger travel requirements. The mobile application helps travelers plan, store and manage their verified certifications for COVID-19 tests and vaccination status in a more secure and efficient way than current paper processes.

And because individual privacy is a concern across the globe, the IATA Travel Pass application uses decentralized technology, providing passengers with the sole right to share their data or delete it at any time. In addition to the digital health component, future plans call for the app to allow for contactless travel.

Giving airlines the ability to provide accurate information to their passengers on test requirements and to verify that passengers meet the requirements for travel is key to getting travelers back in the air.

KEY FEATURES

- **Airlines** can streamline the check-in process with a secure, automated and authenticated mobile application
- **Passengers** can feel confident, understand obligations and avoid delays due to requirements not being met
- **Governments** can confirm passenger health status meets requirements prior to travel

A MANAGED CONNECTION TO IATA TRAVEL PASS

WHAT DOES IATA TRAVEL PASS DO?

Travel Pass enables passengers to:

- Find accurate information on air travel and testing for their journey
- Find testing centers and labs at their departure location which meet the standards for testing and vaccination requirements of their destination
- Receive test and vaccination certificates, and verify the certificates are sufficient for their itinerary before sharing them, or the OK to Travel status, with airlines and authorities

Travel Pass enables authorized labs and test centers to securely share test certificates with passengers. Access to traveler booking data, such as country of origin and destination, is key to determining if requirements are met.

MAKING THE CONNECTIONS

Using the connections we've already established with many of the world's airline systems, Collins Aerospace is making integration with Travel Pass simple and streamlined. Our decades of experience enables us to rapidly get airlines up and running. Via an airline's host systems connections, it's quick and easy for us to send passenger data to the Travel Pass application. We connect your system with Travel Pass using our TransAction Service to enable itineraries to be shared by passengers and checked against destination requirements and health records and determine a positive travel status. That status can then be updated for each passenger in the airline's system, eliminating the need for agents to manually verify a traveler's health credentials at check-in. Passenger processing is streamlined, self-service options are re-enabled, and operational efficiency increased as smart business rules can be implemented, such as automated bag drops that will not accept the bags of passengers that are not cleared to fly.

And because this is a managed service, the ongoing support and maintenance of those integrations are our responsibility – making the connection process seamless and reliable.
