

IZON™

## THE INFORMATION YOU NEED, WHEN YOU NEED IT

### A connected platform for business aviation applications and data

Business aviation operators rely on multiple applications and data sources for everything from flight planning to maintenance, fleet status and crew management. Some are inefficient, needlessly complex and unable to share information with one another.

At Collins Aerospace, we address this challenge by offering our business aviation customers Izon, an integrated, mobile-friendly platform designed to adapt and grow with your needs. Izon can provide a central hub for critical tasks, applications and information.

### USER-FRIENDLY DESIGN SIMPLIFIES YOUR WORKLOAD

Izon enables convenient access to many of the tools you use and data you need so there's no jumping from one application to another. It's mobile-friendly and cloud-based for anytime, anywhere access on virtually any device that has an internet connection.

The user experience is streamlined and contemporary to boost productivity. The Izon toolbar provides quick access to frequently used applications, and soon, you will be able to configure the dashboard to see what's most important to you.

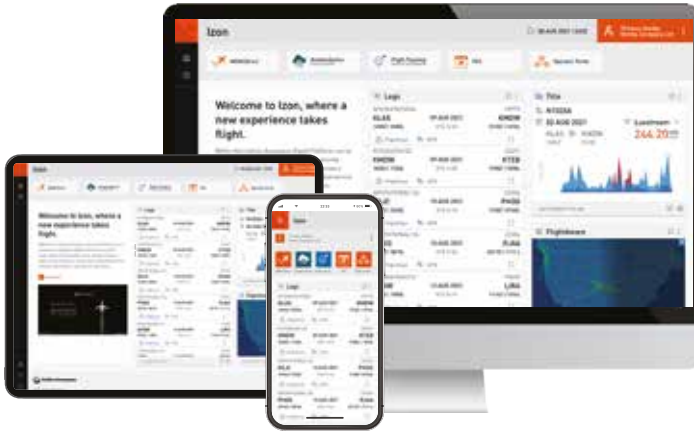

As Izon evolves, users will be able to tailor the interface to directly access the applications they need to do their job.

### KEY FEATURES AND BENEFITS

- Mobile-optimized platform with a modern, intuitive interface
- Single sign-on for all Collins business aviation services
- Customizable real-time reporting, analytics and tools
- Integration of preferred 3rd party solutions and data
- One point of contact with self-serve support options

# Interoperability unlocks the power of data

Izon transforms multiple data streams – from enabled hardware and software on the flight deck and in the cabin, enabled analytics in the aircraft and enabled services on the ground – into meaningful and intelligent output. The result is timely, actionable information that enables streamlined planning, more proactive maintenance and smarter decision making.

Through Izon's centralized architecture, applications are able to share data seamlessly without the need for manual re-entry. The solution is designed for open interoperability, so that applications, services and hardware from select third parties will be able to plug into the platform.

## AN EVOLVING PLATFORM WITH A ROADMAP FOR THE FUTURE

Izon is launching with essential features and applications enabled. Subsequent releases will add new functionality and third-party integration to the core platform.

### Liftoff – Now

- Access to ARINC Direct flight support services and connectivity
- Initial Operator Portal deployment (Fleet Status, Flight Debrief and In-Flight Gateway Admin)
- Quick access to flight tracking and DTN AviationSentry weather

### Ascent – Next

- Integration of legacy applications, including FOS
- User profile customization
- Billing and invoice management
- New, modern flight planning and scheduling tools
- Addition of other Collins aviation business solutions

### Soaring – Ongoing enhancements

- 3rd-party integration
- Access to Customer Service Portal
- Self-service tools featuring enhanced purchasing and payment capabilities
