

SCI-DISCOVER

FLEXIBLE AND AFFORDABLE

Rail information management solution

Collins Aerospace SCi-Discover SaaS solution for railways helps decision makers plan more effectively by gathering asset data from multiple sources and correlating it by location and time.

With Collins SCi-Discover, personnel can track railway asset maintenance or service status and receive warnings of repairs needed – often before failures occur. When a repair is needed, drawings and bills of the materials can be made readily available to enable a faster return to service.

Fundamental for organizational planning and disaster preparedness, SCi-Discover helps determine where work needs to be focused in order to save time and cost. Leveraging Cloud technology, our SCi-Discover solution supports proactive strategies that help improve long-term asset reliability and performance.

Collins has helped rail organizations use and benefit from digital information. Our flexible and affordable SCi-Discover is part of our proven SCi-Toolset, and offers enterprise content management (ECM) and geographic information systems (GIS) capabilities.

KEY FEATURES AND BENEFITS

- Enables cross-organizational sharing of information
- Assists leadership with critical decisions
- Warns of potential repairs before failure
- Helps reduce disaster recovery time

FUTURE-PLANNING

Whether your team is designing new or maintaining aging rail infrastructure, help ensure successful and meaningful future-planning with Collins SCi-Discover. Knowing which equipment will need to be replaced and when to expect the expense is critical information that can help organizational leaders make effective decisions.

PREVENTATIVE MAINTENANCE

Preventing downtime is one of the most important goals for railroad organizations. Collins SCi-Discover solution enables cross-organizational information sharing in the field. As part of a preventive maintenance plan, our solution can effectively provide a competitive industry advantage by reducing downtime.

DISASTER PREPAREDNESS

Even with the most advanced equipment, unplanned downtime is an unfortunate reality for railroad organizations. Being prepared for a disaster can reduce downtime and limit costs. Our SCi-Discover is a secure tool for sharing information, so decision makers can safely and quickly make the right call and the organization can recover from the disaster faster.
